

Alert on herbal medicine poisoning

The Department of Health (DH) has recently received notification of a confirmed case of aconitum alkaloid poisoning from the Hospital Authority (HA). Without Chinese medicine practitioner (CMP)'s consultation, the patient obtained Chinese medicines from his friend and prepared decoction of the Chinese medicines by himself. The patient developed symptoms including limb numbness, nausea and dizziness after consumption of the herbal broth. Then the patient was admitted to a public hospital for treatment and was subsequently discharged. Laboratory results from HA showed aconitum alkaloids in the patient's urine samples. Upon investigation, the Department of Health identified that one of the unused Chinese medicines was processed Radix Aconiti Lateralis. The possible contributing factors for this poisoning event are consumption of Chinese medicines without instruction of CMP, overdose and inadequate decoction of the processed Radix Aconiti Lateralis.

Processed Radix Aconiti Lateralis is listed in the Schedule 2 of the Chinese Medicine Ordinance (Cap 549). It is commonly used for pain relief, but contains aconitum alkaloids. If used improperly, aconitum alkaloids can cause perioral and limbs numbness, dizziness, nausea, vomiting, diarrhea, weak pulses and shortness of breath. It can be fatal in severe case. Therefore, prolonged decoction to reduce its toxicity is required before oral consumption.

Members of the public are also advised not to self-prescribe Chinese medicines. Those who are feeling unwell should consult Chinese medicine practitioner before taking Chinese medicines. Medical advice should be sought if there is any discomfort after consumption.

Members of the public may visit the website of Chinese Medicine Division of DH (http://www.cmd.gov.hk/html/eng/health_info/pamphlet.html) for information about safe use of Chinese medicines.
